

Freelance Science Writers Needed for CRISPR Medicine News

[CRISPR Medicine News](#) is the first and only global site bringing high-quality accurate news about CRISPR Medicine (therapies, diagnostics and genome editing). In just 10 months we have reached 5,000 monthly readers from over 100 countries.

The CRISPR Medicine field is growing, clinical trials are ongoing, and we now need to grow too, so that we can keep up with the news! We are therefore looking to add some talented and experienced freelance science writers to our team.

Who Are We Looking For?

We are looking for experienced science writers from all over the world.

A strong scientific background is critical for this role. We conduct interviews with prominent scientists who are all working in very technical fields. There is a lot of scientific language and it's not self-explanatory. It's critical to be able to understand and process the scientific research in order to discuss this with the interviewees and ask questions to gain relevant new insights.

If you are not already familiar with our work, then please check out our website to see what we do. The work will be done remotely, interviews and meetings take place over Zoom or otherwise, and you would have email/Zoom correspondence with our editing staff.

If writing for us sounds interesting and you think you might be a good fit for our team, then please contact us [**editor@crisprmedicineneeds.com**](mailto:editor@crisprmedicineneeds.com) with an introduction of yourself and some examples of previous work.

We look forward to hearing from you!
